

INTRODUCING LIQUIZONS™ – AN EVOLUTIONARY, NEW FORM OF BOTANICAL ALCHEMY

We are proud to make our Amazon Herb nutritional formulas available in our new proprietary Liquizon™ delivery system. This unique process combines the ancient “spagyric” method of extraction, developed by the 15th century Greek physician Paracelsus, with modern, scientific advancements. You get the complete profile of phytonutrients in a convenient, bioavailable form.

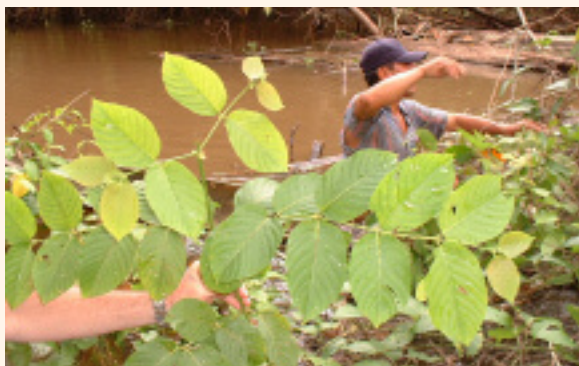

THE SOURCE: THE AMAZON RAINFOREST

The Amazon Rainforest is home to more plant species than anywhere else on Earth. This makes them the most complex, the most diverse, and the most evolved

in terms of phytochemistry. The Indigenous people of Amazonia have used thousands of these plants for ages. By merging Indigenous wisdom with modern, scientific knowledge, research and technology, the Amazon Herb Co. creates the most effective combinations of select botanicals.

HARVESTING WITH THE FUTURE IN MIND

Sustainability is at the heart of everything we do. Before harvesting botanicals, Indigenous groups must obtain collections permits from the Reforestation Committee. Collection permits ensure collection is done in an ecologically sound manner and does not harm the plant species. Doing this not only preserves the Rainforest, it also makes the land more economically valuable than if turned into lumber, cattle fields or soy farms. After harvest, the botanicals are brought to the Amazon Herb Co.'s own processing facility in Peru.

SPECIAL CARE AND HANDLING GUARANTEES PURITY

At the Amazon Herb processing facility, botanicals are inspected by an independent botanist who certifies correct genus and species. Next comes cleaning and warm-air drying, and a phytosanitary certification confirming the botanicals are clean of debris. They are bagged up and loaded onto a truck for a drive over the Andes to the seaport for shipping. Here, export documentation is completed and the bags are loaded onto a ship for a 20-day journey to the Port of Miami.

HAND INSPECTION MEANS NO FUMIGATION, NO IRRADIATION

When the raw material arrives at the Port of Miami, it must pass a series of inspections by U.S. Customs, Food & Drug Administration, and the Department of Agriculture. Amazon Herb Co. has chosen a more expensive and more time-consuming hand inspection process at this point in order to prevent fumigation or irradiation. When the raw material arrives at the lab in Jupiter, Fla., lot samples are taken out for quality control analysis. This consists of inspection by a certified FDA microbiologist, who checks the raw material for harmful microorganisms.

PREPARATION OF THE RAW MATERIAL

After passing rigorous inspections, the pure, raw material is first ground into a predefined particulate size. This makes extraction of the numerous beneficial compounds in each of the plants most efficient. Most Amazon Herb formulas are blends of a number of different botanicals, specially formulated to provide the best results.

THE SPAGYRIC METHOD: EXTRACTING THE COMPLETE PROFILE OF PHYTONUTRIENTS

After grinding, the raw botanicals are put into large flow-through extraction vats along with high-quality ethanol alcohol and water. The vats are then placed in a pressing machine to separate the liquid from the remaining plant material. This process extracts the bioactive components soluble in water and alcohol. The remaining plant material (also known as the “mark”), is rich in trace minerals and other compounds beneficial to health. This leads us to the kiln...

HIGH-TEMPERATURE KILN MAXIMIZES AVAILABILITY OF TRACE MINERALS

After the remaining plant fiber is separated from the liquid extract, the next step is to reduce the fiber to an ash. This is done by running the material through a

high-temperature kiln. The heat in the kiln burns away residual material, leaving a concentrated alkaline ash made up of trace minerals which are an important, yet often neglected component of health and vitality.

OSCILLATOR CREATES MINERALIZED LIQUID

After cooling off a bit, the ash is mixed with pure water and placed in a very special machine known as an oscillator. The ash and water solution is vibrated in the oscillator at an extremely high rate. What this super-high vibration does is imprint the water with the subtle energetics of the mineral ash. This makes the beneficial properties of the ash available to the body, while allowing the larger particles in the ash to be disposed of. This liquid is then mixed with the alcohol/water extract.

This blended liquid is what has become popular as the Amazon Herb spagyric extract liquid formulas. With the introduction of Liquizons, an even more advanced delivery technology, you have the full benefit and bioavailability of the liquid extract in a convenient, concentrated Liquizon capsule.

EVOLUTIONARY, NEW TECHNOLOGY STRENGTHENS CONCENTRATION

The photo above is of a new machine known as the Rotovap. The two liquids (alcohol/water extract and mineral ash extract) are blended together and placed in a large glass beaker. The beaker rests in a vat of warm water and is hooked up to a low-pressure vacuum and rotation device. The gentle heat and low-pressure vacuum cause the water and alcohol to rise to the surface and evaporate off. It essentially gases off all alcohol in the original liquid, and most of the water. The result is a liquid nine times more concentrated than the original solution.

FINAL INSPECTION OF CONCENTRATED LIQUID ENSURES POTENCY AND QUALITY

After going through the Rotovap, the concentrated liquid is inspected using special testing procedures to ensure the final product has the best potency and quality available. Once the concentrated liquid has passed this inspection, it is ready to be placed in convenient vegetarian capsules.

ENCAPSULATED FOR CONVENIENCE AND EASY ABSORPTION

The super-concentrated, alcohol-free "liquid botanicals" are carefully placed inside capsules made entirely of vegetable cellulose. The full spectrum of phytonutrients in each botanical is condensed into super-potent Liquizons. After going through the encapsulation machine, each Liquizon is both machine and hand inspected for quality.

When you place a Liquizon in your mouth, you receive a complete profile of phytonutrients from the richest source of life on the planet – the Amazon Rainforest. As you swallow the Liquizon, these phytonutrients become available for your body to use and feel the benefits of right away. Concentrated, all-natural phytochemistry means you get concentrated, all-natural results.
